

Bachelor of Science (B.Sc.) in Food Science and Human Nutrition (2020 - 2021)

Awarding Institution	A'Sharqiyah University	
College / Centre	College of Applied & Health Sciences	
Department	Food Science and Human Nutrition	
Program Title	Food Science and Human Nutrition	
Program Code	FSHN	
Accredited By	lited By -	
Final Award	Bachelor of Science (B.Sc.) in Food Science and Human Nutrition	
Level of Study	Bachelor of Science	
Language of Study	English	
Benchmarks	Oklahoma State University	
Entry requirements	 A student: should achieve the standards set for the subjects of the General Foundation Program (GFP) at ASU or other equivalent programs elsewhere should have been accepted in Diploma Program and have successfully completed the course requirements towards diploma or equivalent, i.e., Biology, chemistry, Pure Mathematics, Basic courses in Food science, along with university requirements. should have studied subjects which qualify him/her to be enrolled in programs in the College of Applied & Health Sciences must be medically fit. 	
Minimum period of registration	4 years - 8 Semesters	
Maximum period of registration	8 Years – 16 Semesters	
Date specification produced	May 2015	
Date specification last reviewed	November 2016	

1. THE COLLEGE OF APPLIED SCIENCES

The College of Applied & Health Sciences (CAHS) is a pioneering faculty at ASU aiming to promote high international quality education in Oman that prepares students for modern, high quality jobs in various disciplines related to science and technology. The primary focus of the CAHS at ASU is the effective utilization of the Sultanate's resources for sustainable growth and development of the human society in Oman. Our vision is to be among the top applied sciences colleges in the Middle East region recognized internationally for excelling science education and research while contributing substantially to national and regional development and find solutions to issues of strategic importance through basic and applied research and disseminate knowledge to the Omani and International communities which will result in continuous improvements to the quality of life.

2. PROGRAM OUTLINE

Food scientists and nutritionists fuel the minds that feed the world while maintaining a healthy life style. They study the physical, microbiological, and chemical makeup of food and use their findings to develop the nutritious, delicious and innovative foods products that line supermarket shelves everywhere. Moreover, they learn the effect of different processing and preservation practices applied for food on the human systems in order to ensure that safe, high quality and healthy products reach the market.

In this program the students study food safety, biochemistry, microbiology, engineering, and sensory science including the manufacture, preservation, quality assurance, and safe development of food products besides learning clinical nutrition, management of food systems and food services, medical nutrition and dietetic counseling techniques. They develop a greater understanding of the fate of raw agricultural produce, and how such materials are processed and formulated into food products before being presented to the consumer.

3. PROGRAM AIMS

The aims of this program are to develop human resources to meet challenges in processing food for value addition and to ensure food security in Oman by

- a) providing students with an academic foundation in the liberal arts and sciences that will produce competent professionals in the food and nutrition fields
- b) Preparing students to assume leadership roles as successful professionals who engage in life-long learning

4. LEARNING OUTCOMES

Upon completion of the program, students will be able to:

A. KNOWLEDGE AND UNDERSTANDING	 Differentiate the concepts of food science from that of nutrition Identify general food safety hazards and practice safe handling of food Describe the basic biochemistry of food components and principles of food
	preservation and processing

	 Comprehend the concept of food security Discuss the activities of food scientists in ensuring the safety and security of our food supply Describe the chemical composition of the human body and the role of nutrients in maintaining it Discuss the factors affecting food selection and its influence on dietary habits. Outline adequacy of nutrient intakes with dietary guidelines as reference. Describe each nutrient with regard to its function in the body, its food source, and the disorder resulting from its deficiency. Explain the association between dietary habits and chronic diseases. Distinguish safe and healthy foods along with appropriate dietary practices from food fads and fallacies. Design and deliver appropriate diets for humans with specific diseases/illnesses
B. SUBJECT-SPECIFIC INTELLECTUAL SKILLS	 Plan and execute basic laboratory work as well as research or development work Evaluate the outcomes and draw valid conclusions. Design an experiment, investigation or survey or other means to test an hypothesis or proposition Critically analyze information, synthesize and summarize outcomes. Compare and contrast the global food distribution and consumption patterns with specific emphasis to Oman Analyze the reasons for development of food laws based on the concepts of food poisoning Understand and interpret food labelling and its significance Analyze adequacy of a meal in terms of its nutrient content. Assess and analyze the macronutrient/micronutrient content of common foods consumed by individuals and communities Assess and predict the outcome of a problement of a problement
	 prolonged consumption of a diet high in fat, cholesterol and salt content. Critically evaluate and apply the knowledge for planning a balanced diet.
C. PROFESSIONAL / PRACTICAL SKILLS	 Plan, conduct and report on investigations including the use of secondary data

: 🔍

	 Collect and record accurately information or data in the library, laboratory or field, and summarize it using appropriate qualitative and/or quantitative techniques Devise, plan and undertake field and laboratory investigations in a responsible and safe manner. Select and apply a range of methods to solve problems Interpret practical results and present results/research finding in different formats. Apply the concepts of food science for the proximate analysis of some common food materials Apply the underlying principles and methods of food processing, preservations and storage using indigenous as well as modern methods Communicate effectively using appropriate scientific terminology in the general context of food chemistry, food microbiology and food engineering. Use dietary guidelines to plan a balanced diet. Estimate caloric requirements of individuals making use of software, scales and slide rules. Apply the concepts of balancing micronutrients with macronutrient
D TRANSFERARI E SKILLS	consumption for planning a diet.
D. TRANSFERABLE SKILLS	 Communication Acknowledge differences and able to adapt to difference of opinions while being open minded Being assertive while accepting feedback at the same time To be concise and clear and provide specific details supported by scientific data and publications Teamwork and interpersonal skills Perform live projects as a team and contribute to strengthen each others weaknesses Take responsibility and claiming ownership for their responsibility while working in a team Always prepared to listen to team members Information literacy and study skills Recognise a need for information and distinguish ways of addressing gap and select appropriate sources Strategically locate and access information to

construct research strategies
 Compare and evaluate information
 Synthesise and create missing information Numeracy
 Appreciate issues of sample selection, accuracy, precision and uncertainty during collection, recording and analysis of data in the field and laboratory
 Prepare, process, interpret and present data using appropriate qualitative and quantitative techniques and software packages.
 Leadership and entrepreneurship
 Develop good problem solving and decision making abilities
 Understand and assess market needs for development of new food products
Lead clinical trials for nutritional assessments

FSHN F416	Meat and poultry technology	FSHN F414 FSHN F411 FSHN F311	3
FSHN F417	Beverages and plant products technology	FSHN F414 FSHN F411 FSHN F311	3

6. PROGRAM REFERENCE POINTS

This Program has been designed with reference to:

- The Quality Assurance Agency (QAA) for Higher Education (2009) Subject benchmark statements for agriculture, horticulture, forestry, food and consumer services. ISBN 978 1 84979 017 8
- Institute of Food Technologists (IFT) Educational Standards (2001) for most of the core competencies of the program related to food science
- Americans Dietetic Association's (ADA) Commission on Accreditation for Dietetics Education (CADE) (2008) for most of the core competencies related to human nutrition

7. TEACHING AND LEARNING METHODS (indicative)

This program contains courses with lectures, literature-based research, case studies, problem solving in classrooms, practical classes in the laboratory, live projects as well as internship in a food related industry

- a) Through a series of lectures, classroom discussions, laboratory work and other advanced pedagogic techniques the students will gain the support knowledge essential for the successful practice as a food an nutrition expert
- b) By means of integration of theory, experiment, investigation and laboratory work students acquire skills necessary for Scientific and Evidence Base of Practice
- c) The seminars, class room presentations and other leadership activities performed by the students during their course of study in this program will enable them to meet professional practice expectations in the fields of food science and nutrition
- d) Appropriate training provided in this program by means of theory and practice the students will be able to achieve the development of principles into practice and quantitative and qualitative approaches to information
- e) By learning the principles of systems management, the students will acquire the ability to strategically apply those in the provision of services to individuals, organizations and industries leading to professional customer service

8. ASSESSMENT METHODS (Indicative)

Assessment will be formative as well as summative using different forms, including examinations (written, oral or practical). To incorporate continuous assessment, students will have assignments, quizzes and two mid semester exams. The style of assessment will be linked to clearly defined goals and anticipated learning outcomes of each course in the program. It will be managed to promote deep rather than surface learning. Assessments based on real-life problems, with employer involvement and with effective feedback, are valuable and will be included wherever possible

9. CAREER and STUDY OPPORTUNITIES

Graduates of this program will have career opportunities with food companies, health care facilities, academic institutions, community education programs, quantity food service facilities and government agencies. Opportunities for graduate studies are versatile over a wide range of food science, nutrition and dietetics programs available around the world at the levels of masters as well as doctorate.

10. STUDENT SUPPORT

Students attend an orientation program at the start of their studies. They are supported by a student advisor and several course coordinators throughout their studies and the Head of Department is also available to advise on program-related queries.

Students have access to the University's library with a range of reading materials, online resources and study support.

The University's Student Affairs Office supports students in adjusting to university life and advises on issues such as finance, regulations, legal matters, accommodation, transportation, disabilities and career guidance. Opportunities are also provided for students to participate in various extra-curricular activities.

The Student Council is also an important source of support and guidance.

The University has a Student Fund, which considers applications on a case-by-case basis.

Evaluate the outcomes and draw valid conclusions		FS	F	F	FS	F	F	FS	
Design an experiment, investigation or survey or other means to test an hypothe	sis or proposition	F			FS			FS	
Critically analyze information, synthesize and summarize outcomes		S	S		F		S	F	
Compare and contrast the global food distribution and consumption patterns				FS	FS	FS		FS	
Analyze the reasons for development of food laws an regulations based on the o safety, HACCP etc.	concepts of food		FS		FS		FS	FS	
Understand and interpret food labeling and its significance in food industry			F	S	FS	S	F	FS	
PROFESSIONAL / PRACTICAL SKILLS									
Understand and apply the underlying principles and methods of food processing	and preservation		FS	FS	FS	FS	FS	FS	
Apply the concepts of chemical analysis in food science for the proximate analys	sis of food materials		F	F		F	F		
Communicate effectively using appropriate scientific terminology used in the ger	neral context of food		FS	FS	FS	FS	FS	FS	
Plan, conduct and report on investigations including the use of secondary data		FS		F	FS	F		FS	\neg
Collect and record accurately information or data in the library, laboratory or field	I, and summarize it	F	FS	FS		FS	FS		\neg
Devise, plan and undertake field and laboratory investigations in a responsible a	nd safe manner	FS		F		F			\neg
Select and apply a range of methods to solve problems in food related issues			F		FS		F	FS	
Interpret practical results and present results/research finding in different formation			FS	FS		FS			

(i)

Bachelor of Science (B.S) Food Science and Human Nutrition

Upon completion of the program, students will be able to: REQUIRED CO	OURSES:	01 FISHN30 11	FSHN30 13	FISHN30 70	FSHN30 71	FSHN30 12	FSHN40 72	APSC4
TRANSFERABLE SKILLS (INCLUDING FOR EMPLOYABILITY)				-				
Communication Skills		_						
Acknowledge differences and able to adapt to difference of opinions while being open		_	F	F		F	F	F
minded Being assertive while accepting feedback at the same time			F			F		F
To be concise and clear and provide specific details supported by scientific data and publication	tions F			FS			FS	FS
Teamwork and interpersonal skills								
Perform live projects as a team and contribute to strengthen each other's weaknesses	F		F			F		F
Take responsibility and claiming ownership for their responsibility while working in a team	F	FS	F	F	FS	F	F	F
Always prepared to listen to team members	F		FS			FS		F
Information Literacy and Study Skills								
Recognise a need for information and distinguish ways of addressing gap and appropriate so	ources	FS	F	FS	FS	F	FS	FS
Strategically locate and access information to construct research strategies	F		F	FS		F	FS	FS
Compare and evaluate information	FS	FS	FS	FS	FS	FS	FS	FS
Synthesise and create missing information	S	F	FS		F	FS		FS
Numeracy								
Appreciate issues of sample selection, accuracy, precision and uncertainty during collection record	ding F		FS			FS		FS
Prepare process, interpret and present data using appropriate qualitative and quantitative techniq	ues FS		F	FS		F	FS	FS
Leadership and entrepreneurship								
Develop good problem solving and decision making abilities	F		FS	FS		FS	FS	FS
Understand and assess market needs for development of new food products	FS		FS			FS		FS

PROGRAM SPECIFICATION				6	<i>M</i>			
	<u>شرق</u> HARQIY/			C	<u>))</u>			
12. MAPPING of ASSESSMENT of LEARNING OUTCOMES - YEAR 4								
KEY: F = Formative assessment S = Summative assessment FS = Formative & Summative as	sessme	ent						
Upon completion of the program, students will be able to: REQUIRED COURSES:	FSHN4081	FSHN4048	FSHN4072	APSC4039	FSHN40 82	80	FSHN40 85	FSHN40 95
KNOWLEDGE AND UNDERSTANDING								
Differentiate the concepts of food science from that of nutrition	F	F	F		F	F	F	F
Identify general food safety hazards and practice safe handling of food	FS	FS			FS	FS	FS	FS
Describe the basic biochemistry of food components and principles of food preservation and processing		FS			FS	FS	FS	FS
Comprehend the concept of food security			FS		F	F	F	F
Discuss the activities of food scientists in ensuring the safety and security of our food supply SUBJECT-SPECIFIC INTELLECTUAL SKILLS		F	FS		FS	FS	FS	FS
Plan and execute basic laboratory work as well as research or development work				FS	FS	FS	FS	FS
Evaluate the outcomes and draw valid conclusions				FS	F	F	F	F
Design an experiment, investigation or survey or other means to test an hypothesis or proposition				FS	FS	FS	FS	FS
Critically analyze information, synthesize and summarize outcomes				FS	F	F	F	F
Compare and contrast the global food distribution and consumption patterns								
Analyze the reasons for development of food laws an regulations based on the concepts of food safety, HACCP etc.	FS	FS	FS		F	F	F	F
Understand and interpret food labeling and its significance in food industry	FS	FS	FS		FS	FS	FS	FS
PROFESSIONAL / PRACTICAL SKILLS								
Understand and apply the underlying principles and methods of food processing and preservation	FS	FS	FS		FS	FS	FS	FS
Apply the concepts of chemical analysis in food science for the proximate analysis of food materials		FS			F	F	F	F
Communicate effectively using appropriate scientific terminology used in the general context of food				FS	FS	FS	FS	FS
Plan, conduct and report on investigations including the use of secondary data					F	F	F	F
Collect and record accurately information or data in the library, laboratory or field, and summarize it		FS	<u> </u>		FS	FS	FS	FS
Devise, plan and undertake field and laboratory investigations in a responsible and safe manner				F	FS	FS	FS	FS
Select and apply a range of methods to solve problems in food related issues	FS	FS	FS	FS	FS	FS	FS	FS
Interpret practical results and present results/research finding in different formats	FS	FS	FS	FS	FS	FS	FS	FS

PROGRAM SPECIFICATION				1	(III)
